

# Blackmer Gear Pumps for Paint & Coatings Applications

Paint & Coatings manufacturers are looking to increase plant profitability by controlling cost, optimizing uptime, and complying with stringent regulations. Blackmer® E Series and G Series Internal Gear Pumps are reliable and affordable solutions that meet and exceed the operational and safety demands of a modern paint & coatings facility.

G Series Internal Gear Pump

# Challenges of Paint & Coatings Applications

Blackmer Gear Pumps overcome unique operational challenges in the safest, most efficient and profitable way possible.

### **Emissions Control**

### **CHALLENGE**

 Government regulation and compliance with standards regarding control of Volatile Organic Compounds (VOCs)

### **BLACKMER GEAR PUMP SOLUTION**

#### E Series:

 One fluid chamber seal-less design eliminates leak points, ensuring containment of harmful VOCs

#### G Series:

 Universal bracket design accommodates a wide range of sealing options for improved seal integrity

### Productivity

#### CHALLENGE

 Optimize speed and uptime to maximize plant production

### **BLACKMER GEAR PUMP SOLUTION**

### E Series:

 Robust, patented betweenthe-bearings support system eliminates the damaging effects of cantilevered loads, resulting in optimized uptime and unmatched reliability

### G Series:

 Built to the highest standards of quality and reliability for long life and minimal maintenance

## Plant Safety

### **CHALLENGE**

 Protect the welfare of site personnel, surrounding communities and the environment

# BLACKMER GEAR PUMP SOLUTION

### E Series:

 Leak-free design contains hard-to-seal crystallizing, thermosetting or viscous fluids in 24/7 continuous-process applications, helping eliminate exposure of site personnel to harmful chemicals

### Cost Control

### CHALLENGE

- Raw Materials
- Energy
- Capital Investment
- Maintenance

### **BLACKMER GEAR PUMP SOLUTION**

### E Series:

- Leak-free design protects against loss of high-value fluids
- Seven-part design allows for ease of maintenance

### **G** Series:

 Interchangeable with up to 95% of competitive models, with no need to modify piping, driver, baseplate or coupling

# Paint and Coatings Fluids

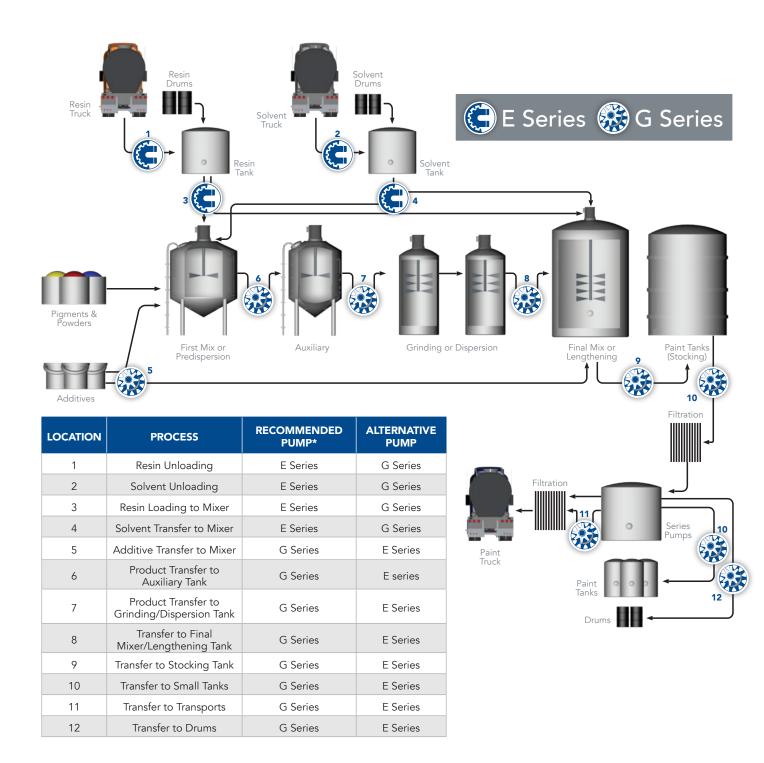

Three types of fluids are most commonly handled in Paint & Coatings manufacturing:

### **BINDERS**

- Acrylics
- Alkyds
- Aminoplasts
- Cellulosics
- Epoxies
- Chloro- and Fluorocarbons
- Natural Plant Oils
- Phonetics
- Polyesters
- Polyurethanes
- Silicones
- Vinyls

# **Process Map**

Blackmer<sup>®</sup> E Series and G Series Internal Gear Pumps can be used across a wide range of Paint & Coatings applications. Traditional manufacturing processes are ideal for G Series pumps, while E Series pumps are the perfect choice for use in applications where optimized safety, cost control and regulatory compliance are significant factors.

#### **SOLVENTS**

- Petroleum Hydrocarbons
  - Aliphatics, aromatics, alcohols, ketones and esters
- Chlorinated Hydrocarbons
  - Methylene chloride, 1,1,1-trichloroethane
- Water
  - Deionized

- Oxygenated
  - Glycol ethers: 2-ethoxyeyhanol, 2-butoxyethoxethanol
- Terpene
  - Turpentine, pine oil, dipentane

#### **ADDITIVES**

- Thickeners/Rheology Modifiers
- Surfactants
- Biocides
- Defoamers
- Co-solvents

- Catalysts
- Flame Retardants
- Friction Reducers
- Plasticizers
- Thickeners
